I'm a young professional who's been working in the technology field as a developer for the last one year, working with a diverse group of individuals on various technological fields primarily in the e-finance sector. I'm looking for a new opportunity to further grow and align my technological skills and experience, with my management and communication skills and be involved in larger responsibilities that reach out to a greater organizational impact.

Skills Summary

Java / Openshift / Docker / Python / Node.js

Management / Communication (English, a bit of Japanese and Hindi)

Education

B.Tech in Computer Engineering

NMIMS University / Mumbai, India / 3.6 GPA

Experience

Rakuten Inc

Application Engineer / October 2018-

+ Part of the backend (Java/Weblogic) and the backend renewal team (Java/Openshift/Docker) for the e-finance arm of Rakuten (Rakuten Bank).

+ Responsibilities were two-fold: developing on the existing and future backend systems and managing a small team to develop new services and design operational updates on the new backend design.

+ Gained experience in development, communication and management, in a waterfall-agile hybrid development environment.

Volunteering

Enactus / Semi-finalist at the Enactus India Nationals' 2015

+ Was involved in on-site NGO visits every week in the slums of Shivaji Nagar, Govandi, Mumbai. Taught English and sewing to the children of sex workers, and sometimes the sex workers themselves as part of a larger effort to empower these women into self-sufficiency.

+ After graduation, I am still involved with current team and help with mentoring and budgeting, in addition to   maintaining and updating the tools that we created (AR education, emergency mobile app) whenever required.
